

The Children's Health Insurance Program is at risk – here's how you can help save it

In 1997, the Children's Health Insurance Program (CHIP) was created with bipartisan support to fill a significant gap in health coverage for uninsured working families. These are families who earn too much to qualify for Medicaid but for whom private coverage remains out of reach. In 2009, the program was reauthorized by Congress with an important addition: a guaranteed pediatric dental benefit. Today, CHIP provides affordable, age-appropriate health coverage to more than 8 million children and 370,000 pregnant women. The benefit makes a huge difference to families: The percentage of children without medical and dental insurance has never been lower! But that could change.

Federal funding for CHIP runs out in September of this year. Federal and state governments share the costs of CHIP, with contributions from enrolled families. State legislatures must finalize their 2016 budgets soon, but unless Congress takes action, there will be no new federal funding to support CHIP after September 30, 2015.

Governors from 39 states submitted letters to Congress in support of a federal funding extension for CHIP. This gives advocates an excellent opportunity to discuss the importance of CHIP with Congressional delegations.

- CHIP is a great deal for states; see data [here](#) (June 13, 2014 report; Appendix 1-A-4)

Key Messages

1. **CHIP is essential to millions of working families:** Today, CHIP provides affordable, comprehensive health coverage to more than 8 million children and 370,000 pregnant women from working families who earn too much to qualify for Medicaid but cannot afford private coverage. If funding for the program runs out, millions of children will be moved into marketplace coverage and could end up without dental coverage, or dental coverage significantly more expensive than under CHIP. A recent report by Wakely Consulting Group estimated that families' cost-sharing could increase by up to 10 times what they pay out-of-

pocket under CHIP. In addition, nearly two million of today's CHIP-covered children would be *ineligible* for subsidized coverage on the marketplaces as a result of the so-called "family glitch."

2. **CHIP is a sound budgetary decision:** According to an analysis by the Congressional Budget Office (CBO), much of the cost of a CHIP extension would be offset by reductions in other federal spending. Further, according to a recent report by MACPAC, an independent commission advising Congress, the federal portion of CHIP funding for two more years would be offset by reductions in federal spending for Medicaid and subsidized marketplace coverage because children would not enroll in those programs if CHIP is available.
3. **Congress must extend funding now:** Unless Congress acts soon, there will be no new funding for CHIP after September 30, 2015. State legislatures, governors, and state agencies are making decisions now about transitioning families out of CHIP coverage. Any disruption to CHIP, even temporary, will hurt millions of families who rely on this coverage and will increase the number of uninsured children. Congress must act now to extend CHIP funding through 2019. This extension will give children uninterrupted, affordable coverage while new options are created in the marketplace.

Dental benefits are especially vulnerable if CHIP ends. To learn more, see this [issue brief](#) from the Children's Dental Health Project (CDHP). For more, contact Colin Reusch, CDHP senior policy analyst at creusch@cdhp.org.
